

# Sita kreatywności

packaging Industry/ Double Lock system , winner of the certificate “Quality of the Year 2015” Strength in the creativity

About revolutionizing a packaging market, we talk with Mr. Konrad Rumiński a designer, visionary, artist, which treats packaging industry as an art in utility and owner of the Plast Service Pack.

**Millions containers produced per year. delivered to 28 countries all over the world is an effect of employing nearly 300 employees in your company. However, this only is the tip of the mountain ,which at the base stands concept, design, commitment and unusual passion in developing solutions, till this day nobody ever dreamed about .**

- It is the idea and invaluable teamwork which has made that today the whole of Europe is focused on Polish products! My philosophy was al-

ways pointing in to creation of unusual things, surprising, but the most of all, useful.

Therefore, when I designed

A system known as Double

Lock, did not expect that it will have such an effect on the perception of packaging and opportunities that have arisen.

**Please , tell me what is the revolution.**

- The development is by making an innovative design solutions in the production of containers of different sizes based on the double closing and thru the strengthening of the crown.

By reaching an excellent tightness we can guarantee safety stored product and in the same time it stretch its usefulness (eg. range Food and paints). Also, increased resistance of the container for accidental opening while transport and storage translates to savings in the its distribution.

**The true work of innovative art is to create a resolution, but the next step is to make it happened, make this technology repeatable and in the best quality it is.**

We have managed to make it with a great success. Thanks to the our polish and one of the kind technical

**DOUBLE LOCK**

team, which I have a great pleasure to cooperate with, we produce plastic packaging by injection, on the best available on the market machines, reaching a 100% repeatability

and therefore practically having zero tolerance of complaints.

I think that the growing interest in the international companies in what we do, and I'm talking here about Double Lock, is a real confirmation of the quality of our work.

**The Double lock technology been appreciated by the jury of the QUALITY OF THE YEAR®, By giving her Certificate in the category of Innovation.**

**How important it is for you?**

- I'm very appreciated for that recognition by an independent body. For us it is an ennoblement and confirmation of that our work get in need of the market with top quality parameters.

**I wish you further success.**

**thank you for the conversation.**
